

Computer Requirements for Power Sellers & Click Dialers

To operate a **Power Seller** or **Click Dialer** you will need the following:

- 1) Desktop or Laptop computer with either Windows XP or Windows Vista or Windows 7. (Note: We sell new and refurbished computers. See below.)

Minimum System Requirements: 1 GHZ processor, 512 MB of RAM, 10 MB of available hard drive space, Super VGA Monitor, Keyboard, Mouse, Sound Card, and available USB port. Important Note: If you will be importing large lists of telephone numbers, you may need a faster processor, more RAM, and more hard drive space.

- 2) High speed (broadband) internet connection.

Requirement Details: Each user will need at least 90 kbps upload and download bandwidth. If using Dolphin or Green Mamba, a high speed broadband internet connection on your PC is required. Multiple Power Seller users on the same internet connection will require adequate internet bandwidth to maintain high quality service. If using Cheetah, a broadband internet connection is recommended to get updates and use all of the features available with The Power Seller.

Important Internet Connection Notes: 1) The Power Seller does not work well with dial-up internet or with satellite internet. 2) When using Skype or other VoIP services, uploading and downloading files may interfere with the voice quality unless you have adequate bandwidth. 3) **Norton** and **McAfee** anti-virus software may block your Skype or other VoIP connection. We recommend using **AVG** anti-virus software. It is free and can be downloaded here: <http://free.avg.com/>
